MTH208a: Assignment 3

ICC Ranking

The International Cricket Council provides ranking for cricket players. Your goal in this assignment is to scrape Women's One-Day International Batting Rankings. The link for the data is here:

`https://www.icc-cricket.com/rankings/womens/player-rankings/odi/batting`

Create a `data.frame` with the following data for all 100 players in the list:

1. Ranking (numeric)

2. Name of player (character)

3. Team (character)

4. Rating (numeric)

There should be no other columns in the `data.frame`, so that the final dimension of the dataset is 100×4. Also be careful to save Ranking and Rating columns as numeric!

Save the final `data.frame` in an object called `icc_rank`. Copy and paste your entire code working code to into the `assignment3.R` file in your GitHub repository.

Note: Make sure the code you paste runs with ZERO errors. If the code produces a single error, no marks will be given.
